In the Claims:

- 1.(currently amended) A device for dispensing a liquid into a vessel, ~~a fluid at a locus~~, the device comprising a reservoir of fluid in liquid form, a syphonic-action elongate liquid delivery means having a proximal end inside the reservoir adjacent the bottom thereof and a distal end from which the fluid is dispensed as a liquid or as a vapour, and means for securing the device adjacent the rim of the vessel with the reservoir outside the vessel and with the distal end of the liquid delivery means inside the vessel.
- 2.(previously presented) A device according to claim 1, wherein the fluid is dispensed from the distal end as a liquid.
- 3.(previously presented) A device according to claim 2, wherein the device includes a part wetted in use by liquid dispensed from the distal end, from which part liquid or vapour passes to the locus to be treated..
- 4.(canceled)
- 5.(currently amended) A device according to claim 1 ~~claim 4~~, wherein the means for securing the device onto the rim comprises a part which extends over the rim of the vessel and a part which extends therefrom downwardly into the vessel, in use.
- 6.(previously presented) A device according to claim 5, wherein the liquid delivery means is in contact with each of the said parts.
- 7.(previously presented) A device according to claim 5, wherein the device defines a generally U-shaped opening adapted to engage resiliently over the rim, in use.
